

# Provisional Agenda

Wednesday **04.12.2024**

**09.00** Registration Opens - Tea, Coffee & Refreshments - 30mins

**9.30** Dr Julian Brown - GP, PCN Clinical Director & Eclipse Clinical Lead

40mins

### Protect

What are the Key 12 programmes to transform healthcare and working well initiatives and how can these be effortlessly implemented across each ICB.

**10.10** Professor Tony Avery - NHSE National Clinical Director for Prescribing

30mins

### Prescribing Protect - The Impact of Prescribing

Each year over a billion prescriptions are generated in primary care. Most of these medications are highly efficacious but a significant number have the potential to cause harm for patients. Deprived patient groups are more likely to receive medications associated with poor outcomes and less likely to receive protective agents. A systematic approach to reviewing these at-risk individuals can significantly improve health outcomes and working well initiatives.

**10.40** Dr Clare Hambling - NHS National Clinical Director for Diabetes and Obesity

30mins

### Obesity and Diabetes Protect

What is the need for obesity support and how can this be done centrally by ICBs.

**11.10** Mid Morning Break - 20mins

**11.30** Dr Sebastian Brown - Eclipse Director of Digital Transformation

30mins

### Health Protect

How can we automatically engage with all NHS patients to better understand their individualised needs and risk scores in relation to health care outcomes and working well initiatives.

**12.00** Professor Ramsey Cutress -

30mins

Professor of Breast Surgery University of Southampton and University Hospital Southampton

### Cancer Protect

The Stage of Cancer diagnosis is variable across different patient groups and is worse in some groups with higher risk, for example areas of socioeconomic deprivation and some ethnic groups.

Early-stage diagnosis is important to optimise cancer outcomes. A systematic approach to ensure that those at highest risk receive appropriate evaluation and surveillance should improve health outcomes and working well initiatives.

**12.30** Dr James Ferguson - East of England Primary Care Lead for Genomics

30mins

### Equality of Care Protect

How can we deliver enhanced surveillance, identification and equitable support of individuals with common genomic risk factors?

**13.00** Lunch - 45mins

**13.45** **Professor Simon Kenny** - National Clinical Director for Children and Young People

30mins

Using integrated data to assist in the identification, prioritisation, engagement and impact assessment of children support services.

**14.15** **Professor Robin Gore** - East of England Respiratory Clinical Lead

30mins

#### **Respiratory Protect**

Patients with Asthma and COPD are receiving reduced surveillance in primary care since COVID-19. A systematic approach to reviewing these at-risk individuals can significantly improve health outcomes and working well initiatives.

**14.45** **Dr Max Yates** - Clinical Associate Professor and Honorary Consultant Rheumatologist

35mins

#### **Biologics Protect**

Biologics can be some of the most impactful agents to improve patient outcomes but the selection process for individuals is variable and despite the significant costs of these agents their outcomes are not formally evaluated. A systematic approach to monitoring all patients across your ICB can significantly improve the cost-effectiveness, equality of care and health outcomes for your region.

#### **MSK Protect**

Musculoskeletal issues accounts for more time off work than any other condition. Many of these conditions can be better monitored, investigated and treated but require a systematic approach.

**15.20** Mid Afternoon Break - 20mins

**15.40** **Simon Howard** -

30mins

Programme Director for Outcomes, Strategic Commissioning, Cambridgeshire and Peterborough ICS

#### **Statin Protect**

Transforming health care through ICB led support programmes.

**16.10** **Dr Julian Brown** - GP, PCN Clinical Director & Eclipse Clinical Lead

30mins

#### **Using Centralised Data to Automatically Deliver Your ICB's Work Well Initiatives**

Central surveillance and automated support for patients out of work significantly improves the rate of individuals returning to work and reduces admission rates by over 30%.

How can this be efficiently implemented across your region.

**16.50** Conference Close

**17.00**

We invite you all to join us on the 3rd floor of the Royal College of GPs, the new Eclipse offices, for a drinks reception and an update on the Core Equality of Care and Charity Programmes for 2025.
