

Introducing Prescribing Services Advice and Guidance module

We are pleased to announce that the Prescribing Service Advice and Guidance module is now available under NHS Digital GPsoc Lot 1 with central funding (as of 01/03/17). Its use is associated with significant reductions in emergency admissions and A&E attendances from primary care and is provided by Prescribing Services Ltd.

The Advice and Guidance module offers GP practices dynamic risk stratification alerts for their patients and automated access to specialist advice and guidance. This is the first risk stratification subsidiary service to receive full NHS Digital assurance under the centrally funded Lot 1 framework.

It is fully compatible and complementary to all four Principal Clinical Systems, and is specifically designed to improve patient safety, reduce admissions into hospital and enhance GP practice work efficiency.

Visit the Prescribing Services Ltd website for more information on the Advice and Guidance subsidiary module service.

If practices would like to place an order please contact your commissioning organisation for further information.
